## ABOUT US

### The Crammix Legacy

Crammix Bricks planted its roots in 1947, when a ceramic chemist and his partner uncovered a large deposit of grey stoneware on what was then known as the Groenland Farm. This 141-hectare portion of land became the source of raw material in the manufacture of glazed pipes, face bricks and other ceramic wares.

Today, Crammix Bricks is positioned as one the largest and most technologically advanced producers of clay brick products in South Africa, whose standards exceed environmentally-friendly and international performance criteria.

Since 1980, when the Rumble family acquired the company, Crammix Bricks has been built on a foundation of values that extend way beyond its day-to-day operations. The company's commitment to its people, customers and continuous product innovation, has all contributed positively to our loyal client base, reputation and success.

We take pride in being the first brick manufacturer in the Western Cape to have achieved the stringent ISO 9001 quality certification for our systems management, with most of our products carrying the SABS quality mark of approval.

### Training and Development

At Crammix, we invest in the development of our people through training in both regulatory compliance as well as skills development. This is further enhanced through adult-based education, employment equity and experiential learning in the workplace, resulting in improved product quality, efficiency, productivity and staff morale.

## Occupational Health and Safety

Crammix Bricks has an excellent safety record, which has been achieved through ongoing education, improved safety equipment, infrastructural units and good incident investigation procedures to ensure mistakes are not repeated. Safety signage has also been installed around the premises. These measures have earned our company an MBSA award, and are in compliance with the Occupational Mines, Health and Safety Act.

---

## Innovators

Bought in 1980 by the Rumble family in whose hands it remains, Crammix Bricks has in the past two decades become one of the most technologically advanced clay brick factories in South Africa, with products of international standard.

"Our objective", says Bernie Rumble, "was to generate a competitive market and give the industry we served what it needed. We have achieved our goals by being innovative within the framework of an evolving construction industry. Where new design and construction criteria have had to be met, we have researched and developed new products, while improving those which have traditionally proved successful."

The company has made giant leaps with innovative products like modular clay cobbles and paving units, light weight maxi walling units, new colours and the latest being clay wine coolers. The bulk of its products carries the SABS quality seal of approval and Crammix Bricks is also the first brick manufacturer in the Western Cape to have achieved the stringent ISO 9001 quality certification.
