

## SUSTAINABILITY

- **Our Commitment**
- Sustainable Resource
- Sustainable Manufacture
- Quality Standards

### Committed to Sustainability

At Crammix we talk about quality. Not only about the quality of our clay face, plaster bricks, pavers and wine cooling products, but also about the inherent qualities that form part of our economic, environmental and social commitment to sustainable development.

We abide to the highest standards of environmental management and operational practice. This includes reducing energy and water consumption, encouraging economic regeneration through local employment, as well as minimising waste, carbon emissions and the impact of manufacturing activities on the local community.

Our commitment to sustainable building has also led to the development of clay plasters that are not only lighter, but also meets all of the quality and performance criteria of a standard clay brick, while using less materials and energy to produce.

Overall, our 'inside-out' approach to best practice has resulted in positive staff morale, product quality, productivity - and ultimately long-standing relationships with our clients.
